Fructozym® EC Color
Highly active special pectinase for coloured fruits

Product description
Fructozym® EC Color is a liquid highly concentrated pectolytic enzyme for production of colour intensive fruit juices. It is especially suitable for a quick pectin degradation in case of rather acidic fruits.

Typical applications of Fructozym® EC Color are:
- Disintegration of cell tissue for improved pressing with high juice yield
- Quick cleavage of pectin for lowering fruit mash viscosity
- Colour intensive and colour stable fruit juices
- complete pectin degradation in fruit juices as a prerequisite for clarification and filtration

Dosage
The required enzyme dosages depend on raw material, ripening, temperature and reaction time. Guidelines for application at 45 – 55°C and 1 – 2 h reaction time:

<table>
<thead>
<tr>
<th>fruit</th>
<th>ml/1,000 kg mash</th>
<th>ml/1,000 l juice</th>
</tr>
</thead>
<tbody>
<tr>
<td>black currant</td>
<td>100 - 200</td>
<td>20 - 40</td>
</tr>
<tr>
<td>other berries</td>
<td>50 - 150</td>
<td>5 - 25</td>
</tr>
</tbody>
</table>

Fructozym® EC Color is diluted with cold tap water to a 5 - 10 % solution. Dosage is made directly into the mash lines after the heater, or into the mash tank as first component. A subsequent stirring in intervals supports the effect of Fructozym® EC COLOR. An additional enzyme dosage to the juice leads to fully completed depectinisation.

Storage
Best storage conditions are 0 - 10 °C. Higher temperatures will cause shortage of product shelf life. Avoid temperature above 25 °C. Reseal open packages and use completely on short term.
